23164 John Roe Drain

IN HAMILTON CINCUIT COURT,

23164

IN THE MATTER OF THE PETITION OF JOHN HOS, ET. AL. FOR THE REPAIR OF THE JOHN HOS BRAIN.

Report of the Drainage Commissioner and Engineer, To the Henerable Board of Commissioners of Hamilton County, We the undersigned Commissioners of Drainage and the Engineer, to whom the above entitled potition for Drainagesf certain lands in Adams Township, Hamilton County, Indiana, was referred.

We would respectfully report that we met in the Auditors Office on the 6th day of March, 1929, qualified and preceded to view said Drain and lands

effected thereby.

After a careful investigation of the condition of maid drain, we are of the epinion that said Drain should be repaired and in a manner set out in this report and that the same when completed will impreve the public health and will reclaim certain lands, and will be a public utility, and will benefit highways, also that the costs of constructing, damages and expenses of effecting said Orain will be less than the benefits to the lands effected by said Orainages.

That we definately determined the best and cheapest method of effecting the Drainage of such lands, we have fixed the reute, location and character of said proposed work and have fixed the same by meteo and bennes, courses, distances, descriptions and guides and bench marks, for complete outlet fear the Drainage of said lands effected by said proposed work; that we divided the little in to sections of not more than 100 feet in length by notting stakes

at each 100 feet.

LOCATON.

Commencing 150 feet south and 10 feet west of the center of the Northeast quarter of Section 13 Township 20 North, Hange 3 East, run thence North H3' East 70 feet, thence North 33' East 630 feet; thence North 19' East 300 feet thence North 25' East 700 feet; thence 2' Mast 4610 feet and terminate in 1ittle Cicere Creek at a point 450 feet west and 534 feet north of the Northment corner of Section 13 Township 20 North, Range 3 East, Also an Are beginning 340 feet west and 70 feet South of the Northment corner of said Section 13; run thence North 76' West 227 feet and enter Main Ditch at Station 18-50 on and Main Ditch. And Consist of Osciology Osciology Consist Report North Station 8 mach Vile

RAQUIRES ENTS.

Said ditch to consist of one row of dimen tile from station 0 to station 4-50, and one row of 10 inch tile from station 18-60 and one row of 14 inch tile from station 18-60 to station 32-26 and an open channel 3 feet wide in the bettem with side alopes of 45 degrees from station 22-26 to 23-10. At station 18-60 shall be constructed a Construct Catch Basin 4 feetby 7 feet by 4 feet six inches outside measurements with walls and bettem 8 inches thick, and to be covered with a latticed grate made from 15 by 15 angle Irons as shown on Plan. At the lewer end of the tile shall be imbedded in concrete by placing a bed of concrete for the tile to be laid upon and then running a 2 inch layer of concrete completoky around the tile for a distance of 25 feet back from inks and of tile.

Said ditch to be constructed by excavating all earth, mud, clush, boulders rocks and stone from the bed of said ditch to the depth add width shown on the tabulated shamtstatements of cuts and widths. Said tabulated statement is hereby made a part of this report.

All materials excevated shell be equally distributed on both banks by alternating the lifts, and shall be deposited not negror than three fest from the break of the bank(meaning the line as indicated by the slope with the general elevation of the ground) Said materials not tobe left in heaps or piles

2370

The work will be staked by the Engineer and his stakes must be a carefully perserved and fellowed. The digging of each and every portion of the Ditch must be at its outlet, or its junction with another Drain towards its upper end. The Ditch to be dug along one side of the line of the Survey Stakes, and sufficient from so as not to disturb thom, and shall be dug in a staright and clean manner. In taking out the last draft, at the blade of the spade must not go deeper than the grade line. The ditch must be dug accurately and true to the grade at the depth indicated by the figures given byx the Engineer, measured from the grade stakes. Thelaying afthe tile must begin at the lower end and proceed upstream. The tile must be laid as closely as practicable and in a line free from creeks, the pieces being turned about m until the upper closes. unless there is sand or fine silt which is likely to run into the tile, in which case the lower edge must be laid close and the uper side covered with clay or other material. When making turns or by other unavoidable reason a crack of one fourth() inch or more is necessarily left, it must be securely covered with broken pieces of tile or other indestructable material, junctions with branch lines must be carefully and and securely made.

After the tile have been laid and inspected by the Engineer or his representaves, they must be covered with the earth excavated from the trench, or berrowed clay or soils where said trench does not afford wasufficient material, and in ne case less than two(2) feet in depth over the tile in new cuts. And where said drain is in an open channel the filling shall be to a depth of not less than two (2) feet above the top of the Tile, for the full width of said channel, in ne case must the tile be covered with sand without other material first being used, and in ne case will be ulders or heavy rock be allowed in the filling if they may in time come in contact with the tile.

The Ditch Contractor must assume all risk from caving in of the Ditch and when each drain is completed it must be free from sand and mud before it will be received and paid for in full, In case it is found impresticable by reason of bad weather or other unlooked for trouble in digging the ditch or properly laying the tile, to complete the work specified in the contract the time may be extended as mutually agreed upon by the contractor and the Engineer.

The contractor shall use all nessessary presention to secure his work from injury while he is constructing the drain.

All tile and material used in the construction of this drain and its tributaries thereto, included in the requirements of these Specifications shall be first class in every respect and subject to rigid inspection by by the Engineer.

The Engineer shall have authority to lay out and direct the work, and to inspect and supervise the same during the construction and completion to see that it is properly done in accordance with the Specifications and Contract, and his instructions shall be fully carried out.

CONCRETE WORK.

Specifications shall be a mixture of 1-2-3; One part Portland Cement, Two
Parts Sand and Three Parts Gravel. The sand and gravel to be free from dirt
leas and other foreignxmateix matter, The Cement sand and gravel to be image
throughly mixed while dry until it presents an even shade of coloring
throughout, then made into a mederately set morter, and be immediately
placed in the forms for moulding the concrete into shape. The forms for all
concrete work shall be neatly constructed from strong materials, and shall
be true to lines, dimentions and shape given for the different strustures.
